

Issue No.	Page URL	Location	Defect Summary	User Impact	Screenshots / Video	Severity	Browser	Operating System	Screen Reader	WCAG 2.2 Success Criterion Failure	(optional) Remediation Recommendation	Note
1		Navigation Bar	At 400% zoom Desktop: The fixed header navigation bar occupies approximately 40% of the viewport height Mobile: Not all menu content is accessible (no scroll functionality available within the menu)	For users with low vision or those using keyboards, the main content may be difficult to see, usability may be reduced, and the inability to scroll the mobile menu may prevent access to some links, leading to user drop-off and lost business opportunities.	https://gyazo.co	Critical	Mozilla Firefox 147	Windows10	N/A	1.4.10 Reflow - Level AA 2.1.1 Keyboard - Level A	- Change the display of the mobile menu bar from Sticky to Static - Add scrolling to the mobile menu	
2			During arrow key navigation testing, the "About me" and "Work" links are announced together as a single item	Unable to click each link separately.		Critical	Mozilla Firefox 147	Windows10	NVDA	1.3.1 Info and Relationships - Level A	By enclosing each link text in a Div block, each can be focused separately.	
3			The language switch button labels "EN/JP" are read out as "E-N, J-P" rather than as language names	The language switching function may not be understood by visually impaired users, leading to them leaving the page or being unable to view content in the appropriate language.	https://gyazo.co	High	Mozilla Firefox 147	Windows10	NVDA	2.4.4 Link Purpose (In Context) Level A	Add an aria-label such as "Switch language to English" so that the screen reader understands the purpose of the link.	
4			The mobile menu does not include a "Close (✖)" button	Screen reader users may become unable to exit the menu.	https://gyazo.co	Critical	Mozilla Firefox 147	Windows10	N/A	2.1.1 Keyboard - Level A	Implement a close button within the mobile menu.	
5			Language switch button: No visible focus/hover state, making it difficult to perceive on interaction	For elderly users and those with mild or low vision impairments, the visual change of buttons or links when hovering over them is particularly effective as a cue for operation, as it instantly indicates that it is clickable.	https://gyazo.co	Low	Mozilla Firefox 147	Windows10	N/A	N/A	Add visual changes on hover (background, text color, underline, etc.).	
6		WHAT I DO section	Within the "Skill set" section, the items "HTML" and "CSS" receive keyboard focus individually despite having no actionable functionality	It becomes more troublesome because you have to move each item one by one.		Medium	Mozilla Firefox 147	Windows10	NVDA	1.3.1 Info and Relationships - Level A	Using aria-label with list elements instead of link or button tags allows you to communicate the correct structure to machines and the purpose of the list to users in advance.	This makes it possible for users who don't need the information read aloud to skip the list.
7			Link text: In "See Work Samples >>", the symbolic characters are announced as "greater greater"	The ">>" part is meaningless noise.	https://gyazo.co	Medium	Mozilla Firefox 147	Windows10	NVDA	1.1.1: Non-text Content - Level A	Enclosing ">>" in a span tag and adding aria-hidden="true" prevents it from being read aloud.	To make the development process more efficient, assign a common class to all decorative elements.
8			A decorative image used in the TRANSLATION section is focusable despite being non-informative	It creates unnecessary expectations in the user.	https://gyazo.co	Medium	Mozilla Firefox 147	Windows10	NVDA	2.4.3 Focus Order - Level A	If an image is for decorative purposes, set the alt attribute to "".	
9		Project Filter in the WEB CREATION Section	The target size of interactive elements does not meet the minimum 24x24px requirement, even when accounting for surrounding spacing	If targets are too close together, it may lead to accidental taps.	https://gyazo.co	Medium	Mozilla Firefox 147	Windows10	N/A	2.5.8: Target Size (Minimum) - Level AA	Make the target size at least 24px, and ideally around 44px. Alternatively, increase the margins around the target to achieve the desired size.	
10			Only "Work filter" and "Search" are announced, without sufficient contextual information	It is difficult to understand for users that the purpose of the function and what information is required.	https://gyazo.co	High	Mozilla Firefox 147	Windows10	NVDA	3.3.2 Labels or Instructions - Level A	Ensure users clearly understand what they need to do. Example: Name the input form "Filter the projects" and the placeholder "Search by project name or keyword".	
11			For checkboxes: - Only the option labels are announced - The group labels "CATEGORIES," "TOOLS," and "LANGUAGE" are not announced	- The presence of checkboxes is not communicated. - The grouping is not communicated to the screen reader, and therefore the user does not understand what each item represents.	https://gyazo.co	Medium	Mozilla Firefox 147	Windows10	NVDA	3.3.2 Labels or Instructions - Level A 1.3.1 Info and Relationships - Level A	Inform the user that filtering is possible. Example: Use fieldset + legend and set the fieldset to aria-label="Filter the projects by categories(tools, language)".	
12			"EN," "JP" and "EN+JP" are read out as "E-N," "J-P" and "E-N plus J-P" rather than as language names	Users cannot understand what they mean.	https://gyazo.co	Medium	Mozilla Firefox 147	Windows10	NVDA	3.3.2 Labels or Instructions - Level A	It is best to use clear, easily understandable text for labels rather than abbreviations. If abbreviations must be used, apply the following approach: Set aria-hidden="true" on abbreviations such as "EN," and immediately follow them with a element containing clear text (e.g., "English") that is visually hidden. This ensures that screen readers read only the understandable text.	
13			In search results, the number of results and project names are read out together without clear separation. - When there are zero results, no status message is conveyed	The number of results and the project name are read aloud together, making it difficult to understand what the numbers represent.		Medium	Mozilla Firefox 147	Windows10	NVDA	4.1.3: Status Messages - Level AA		
14			When there are zero results, no status message is conveyed	If the result is 0, no alert comes up and therefore users have no way to even know if the search was successful.		Medium	Mozilla Firefox 147	Windows10	NVDA	4.1.3: Status Messages - Level AA	Implement JavaScript implementation to notify users of changes, such as "Search results: 0 items".	
15		Project Cards in the WEB CREATION Section	Elements are announced sequentially as fragmented items (e.g., "LP," "JP," etc.) without meaningful context	Because it lacks context and is an abbreviation, users cannot understand it.		High	Mozilla Firefox 147	Windows10	NVDA	1.3.1 Info and Relationships 2.4.6 Headings and Labels 1.3.2 Meaningful Sequence	Each card should represent one focus, and an understandable, read-aloud explanation should be set using aria-labelledby or aria-label.	In Webflow, an aria-label for each project can be defined using a CMS field.
16			The aria-label values set in Webflow CMS are split mid-string, causing partial text to be announced as separate links to the same link	Interfering with user operations		Low	Mozilla Firefox 147	Windows10	NVDA	3.3.2 Labels or Instructions - Level A	Make the aria-label value more concise. Example: Removing the colon made it work correctly.	
17			A <button> element is used for category labels, but no actionable behavior is associated with it	Role mismatch can lead to false expectations regarding assistive technologies and cause unnecessary tab stops (focus noise) during keyboard operation, which may confuse the user.	https://gyazo.co	Medium	Mozilla Firefox 147	Windows10	NVDA	4.1.2: Name, Role, Value - Level A	Use semantic HTML tags. Specific example: Change a <button> to a non-interactive element such as and modify it so that it does not receive focus.	
18			Two consecutive link blocks point to the same destination page	Because information is displayed redundantly, it causes unnecessary actions and confusion for users. There is also a concern that search engines may recognize it as duplicate content.	https://gyazo.co	Low	Mozilla Firefox 147	Windows10	NVDA	WCAG Technique H2	Combine links into one.	
19		BACKGROUND section	The link to the Contact form is announced as "WORK WITH ME?" rather than a clear description	The purpose of "moving to the contact form" is not clearly stated, and users have to guess the content of the linked page.	https://gyazo.co	Low	Mozilla Firefox 147	Windows10	NVDA	2.4.4 Link Purpose (In Context) - Level A	Use aria-labels to supplement the meaning of links (e.g., "Contact me").	
20			When scrolling upward, the color contrast of "WORK WITH ME?" falls below the required contrast ratio threshold due to background color changes	The link button may be difficult to see or recognize.	https://gyazo.co	High	Mozilla Firefox 147	Windows10	N/A	1.4.3 Contrast (Minimum) - Level AA	Fix the background color change when scrolling.	
21		ADDITIONAL INFORMATION in the BACKGROUND section	Heading structure is not logical. Two consecutive headings are marked as <h3> Qualification names and links to certificates should be clearly separated and consistently structured	A non-logical heading structure makes it difficult for users to understand the content. When the purpose of a link is unclear, users may skip it.	https://gyazo.co https://gyazo.co	Medium	Mozilla Firefox 147	Windows10	NVDA	1.3.1 Info and Relationships - Level A 2.4.6 Headings and Labels - Level AA 2.4.4 Link Purpose (In Context) - Level A 3.2.4: Consistent Identification - Level AA	Revise the logical structure and standardize the notation of qualification names and links throughout the section. Examples: - Organize the heading structure. - Place a separate window link icon to the certificate next to the qualification name - Use an aria-label to indicate the link content (file name, format, whether it opens in a new tab).	

Issue No.	Page URL	Location	Defect Summary	User Impact	Screenshots / Video	Severity	Browser	Operating System	Screen Reager	WCAG 2.2 Success Criterion Failure	(optional)Remediation Recommendation	Note
22			Months are displayed in abbreviated form (e.g., "Nov" for November) and announced ambiguously (e.g., "Nov")	The content is incomprehensible not only to the user but also to the computer.	https://gyazo.com/ca9d99113e3f7172888fa69e7cc983	High	Mozilla Firefox 147	Windows10	NVDA	3.1.2 Language of Parts - Level AA	Change to the official month name display. If it is necessary to display it in an abbreviated form, hide "Sep" using aria-hidden and add the text "September" to make it recognizable only by screen readers.	Although not applicable in this case, use semantic tags when the month name has an important meaning. Example: Use the <time> tag to specify the datetime attribute in YYYY-MM-DD format.
23		PHOTO GALLERY	All images are announced as "Open lightbox," but activating them does not trigger any action	It's presented as an interactive element, but nothing happens when you click it, giving users false expectations.	https://gyazo.com	Medium	Mozilla Firefox 147	Windows10	NVDA	4.1.2: Name, Role, Value - Level A	Remove the "Lightbox Link" surrounding the image.	
24		CONTACT FORM	The target size of interactive elements does not meet the minimum 24x24px requirement, even when accounting for surrounding spacing	If targets are too close together, it may lead to accidental taps.	https://gyazo.com	High	Mozilla Firefox 147	Windows10	N/A	2.5.8: Target Size (Minimum) - Level AA	Make the target size at least 24px, and ideally around 44px. Alternatively, increase the margins around the target to achieve the desired size.	
25			The email address and phone number on the left side are not focusable and cannot be announced by assistive technologies	Users may not be able to find the information, potentially leading to lost opportunities.	https://gyazo.com	Critical	Mozilla Firefox 147	Windows10	NVDA	1.3.1: Info and Relationships - Level A 2.1.1: Keyboard - Level A	Clearly communicate meaning and structure to the machine and supplement with aria-labels. Example: Use the <link> element, set the href attribute to mailto for email addresses and tel for phone numbers, and use the <address> element for the parent block.	Keep the content of the aria-label concise. Examples: "email: xxx@xxx.xx.xx" "tel: +9 0 1 2 3 4..." "Do not include hyphens in the phone number, and separating each digit with a space will allow each number to be treated individually, making it easier to understand."
26			Upon entering the form, it is announced as "Contact 6 form," which is not descriptive	The noisy pronunciation of "Six" can lead to unnecessary speculation and confusion.	https://gyazo.com	Critical	Mozilla Firefox 147	Windows10	NVDA	4.1.2: Name, Role, Value - Level A	Rename Form	
27			One form question is not announced: "If you choose 'Website', which of the following best describes you?"	If questions are not read aloud, it may potentially result in a loss of business opportunity as the inquiry cannot be completed.	https://gyazo.com					2.4.6: Headings and Labels - Level AA	Use fieldset and legend correctly.	
28			Error messages are not specific: For example, when submitting an email address without an "@" symbol, the error message only states "Please enter an email address"	Users may not be able to complete form submission because they don't know exactly how to make the necessary corrections.		High	Mozilla Firefox 147	Windows10	NVDA	3.3.3: Error Suggestion - Level AA	Clearly present this as a note before input, or implement it as a conditional error message.	
29			An icon indicating location/address does not convey meaning to screen readers and is announced only as "Hyogo, Japan"	Lack of context, unclear.		Medium	Mozilla Firefox 147	Windows10	NVDA	1.1.1: Non-text Content - Level A	Clearly communicate that "the base is in Hyogo, Japan." Specific example: Enclose the address in an <address> block and set the aria-label.	
30		FOOTER	Two consecutive links point to the same URL (logo image link and text link "HOME")	Because information is displayed redundantly, it causes unnecessary actions and confusion for users. There is also a concern that search engines may recognize it as duplicate content.	https://gyazo.com	Low	Mozilla Firefox 147	Windows10	NVDA	2.4.4 Link Purpose (In Context) - Level A WCAG Technique H2	Combine links into one.	
31			The accessible name of the logo image link in the footer is not appropriate	It's hard to tell what the link is for.		Medium	Mozilla Firefox 147	Windows10	NVDA	2.4.4 Link Purpose (In Context) - Level A	Set the link's aria-label to "Home".
